Whole Shell Eggs to Liquid Whole Eggs

Liquid whole eggs can be easily used in place of whole shell eggs in your formulations. For each formulation, simply calculate the average weight of the whole shell eggs used to determine how much liquid whole eggs are needed.

Steps to determine the average weight of the whole shell eggs in your formulation:
1. Put empty container on scale and tare to zero.
2. Crack required number of whole shell eggs into container.
3. Enter weight of the whole shell eggs on line below.
4. Repeat steps (1 to 3) four more times.
5. Compute the average of the five weights.

Find the Replacement Liquid Whole Eggs Weight

Record the number of whole shell eggs in your formulation

\[
\text{Total Weight}^* + + + + + = \frac{\text{Replacement liquid whole eggs weight}}{5}
\]

Total Weight* + + + + = Replacement liquid whole eggs weight
(average weight)
