**WHY EGGS?**

**Muscle & Bone Health:** The high-quality protein in eggs helps maintain and repair muscle while supporting bone health. And eggs are one of the only foods that naturally have vitamin D, which along with calcium, is critical for building strong bones.

**Brain Health:** Eggs are an excellent source of choline and one of the most concentrated food sources of choline in the American diet. Adequate choline intake supports brain health throughout life.

**Eye Health:** Lutein and zeaxanthin found in egg yolks can help protect the eyes from harmful blue light emitted from devices like smartphones, computers, and tablets.
**THEN MAKE IT FUN!**

**QUICK TIPS:**

1. Adjust portion sizes and presentation based on age and dietary preferences.
2. Don’t have a box? Pack components in whatever reusable containers you have.
3. Add whatever vegetables you have on hand to frittata muffins. (Eggs are a great carrier for under-consumed veggies!)
4. Don’t throw out the egg yolk! Nearly all the vitamins and minerals are located within the egg yolk including choline, lutein & zeaxanthin, and about 40% of the protein.
5. Pack your lunch in an insulated bag with an ice pack.
